

Schools of medicine consist of three objectives; **Education** (Nurturing medical students and young doctors), **Research** (Pragmatic researches to develop new methods for diagnosis and therapies) and **Clinical practices** (Treating patients).

It is indispensable to push forward medical treatment as a science in collaboration with the society.

The image shows these three objectives as circles.

Eiji Kobayashi Lab at Keio University School of Medicine has been accelerating faster than ever the researches to achieve these three objectives for the sake of suffering patients from incurable diseases through the optimization of both **academic connections** and **co-researches with corporations** he has been establishing so far. The above **Two wheels** imply these relationships.
