

Prof. Kobayashi's lab dedicated to Organ Fabrication at Keio University School of Medicine has started connecting with researchers on a global scale through Internet

Prof. Eiji Kobayashi's lab is located in the room 7S4 of Research Park Building at Keio University School of Medicine connects researchers on global scale such as;

Country	University	Co-research partner	Research theme
China Dated June 30	Shanghai Jiao Tong University	Prof. Qingfeng Li	Microsurgery Regenerative Medicine
Germany Dated July 02	RWTH Aachen University	Prof. Rene Tolba	Generically modified animals Imaging technologies
UK Dated July 03	Liverpool University	Dr. Tadao Sakai	Diagnosis and treatment of Cirrhosis

The basis for these co-researches derives from Luciferase-DNA-induced rat (Luc Tg Rat). The rats have been already utilized for researches at more than fifty top-notch research institutes all over the world. The discussions with each institute were filled with implementation of advanced medicines based on the most advanced research datum, which would change the world of various fields of medicine.
